Business Plan

The feasibility study elaborated by Dedini S/A Indústrias de Base is an important tool that provides safe and reliable decisions to the business, whether in Brazil or in other countries.

The feasibility study uses an special software developed by Dedini S/A Indústrias de Base, which includes updated indicators and reference figures for each one of the following business areas: Agricultural, Industrial and Financial.

Dedini S/A Indústrias de Base's leadership in providing equipments and systems for producing sugar, ethanol and energy, joined with 88 years of tradition and leadership in the market, allows the Client to plan its investments, and to achieve the best results for both economical and financial aspects of the business, as well as agricultural and industrial yield.

Agricultural

- Establishing the area needs as for operation, labor, inputs, machinery and equipments.

Industrial

- Mass and energy balance elaboration, considering several production case scenarios.

Financial

- Acquiring the indicators (IRR, NPV, Payback, etc.), considering different market case scenarios.
